

April 2017

The City of Statesville now has the capability to meter self-contained services up to 400 Amp, in both single and poly phase applications. While the City offers meter bases for several different types of construction, we will not be offering 400 Amp rated enclosures, as this equipment must be provided by the customer. See our electrical service policy, for the types of equipment that are allowed on our system. We will continue to service and maintain our transformer-rated 400 Amp services, but all new installations will be self-contained. For further details, please contact the Technical Services division of the Electric Utilities department.
